

RESEARCH INTERESTS

- Information Theory, Coding Theory, Coded Computing for Machine Learning, Wireless Communications.

EDUCATION

- **Technische Universität Berlin** Berlin, Germany
Ph.D. in Telecommunication Systems *Apr. 2021 – Nov. 2025*
 - **Thesis:** Coded Distributed Systems for Content Delivery, Privacy, and Computation
 - **Advisor:** Prof. Giuseppe Caire
- **Sharif Univeristy of Technology** Tehran, Iran
Ph.D. in Telecommunication Systems *Sep. 2016 – Sep. 2018*
 - **Thesis:** Privacy in DNA Sequencing
 - **Advisors:** Prof. Mohammad Ali Maddah-Ali and Prof. Abolfazl Motahari
- **University of Tehran** Tehran, Iran
B.Sc. in Electrical Engineering major in communications *Sep. 2012 – Sep. 2016*
 - **Thesis:** Timing Synchronization of CPM Modulation in MATLAB
 - **Advisor:** Prof. Ali Olfat

WORK EXPERIENCE

- **Technische Universität Berlin** Berlin, Germany
Research Assistant *Apr. 2021 - Present*
 - **Research Project 1 "Demand- and Cache-Private coded caching"**: We studied the coded caching setting under the scenario where cache and demand information should be both kept private. Results were published at the International Symposium on Information Theory (ISIT) and the Transactions on Information Theory journal.
 - **Research Project 2 "Multi-Message Private Computation"**: We studied the Private Information Retrieval (PIR) setting under the scenario where the user aims to retrieve multiple linear functions from the database. Results were published at the International Symposium on Information Theory (ISIT) and the Transactions on Communications journal.
 - **Research Project 3 "Communication-Computation Efficient Gradient Coding"**: We studied the Gradient Coding setting under the hierarchical architecture and privacy concerns. Results were published at the International Symposium on Information Theory (ISIT) and a journal version will be submitted shortly.
- **Sarveen Technologies** Tehran, Iran
Research Assistant *Oct 2019 – May 2020*
 - **Research Project "Indoor Positioning"**: I worked on Indoor Positioning using WiFi signal strength and Kalman filter. The approximate position of the user inside a building is indicated using power of the signal received from multiple access points, then the trajectory is refined using a Kalman filter through pre-defined patterns of movement.

PROJECTS

- **Variational Information Maximization for Feature Selection** Sharif University of Technology
Theoretical Machine Learning course
 - A survey on papers addressing selection of features that are informative rather than redundant in high dimensional data sets and comparison on the methods proposed.
- **Finding the path loss model corresponding to a facility** Sharif University of Technology
Wireless Communications course
 - We used cell phone applications to measure the signal power level received in various points in the Computer Engineering building and then extracted the model fitted to these measures. This model's usage was to find the best locations to put access points in every floor to get the best possible response for signal power level.
- **Implementation of an interface for managing a library and a grocery store** University of Tehran
Advanced Programming course
 - In this project, we wrote codes in C++ and used object-oriented implementation to do different tasks needed in a library and in another project a grocery store. We also used inheritance and other C++ functionalities.
- **Design of a transmitter and a receiver in MATLAB using a USRP cheap** University of Tehran
Software Defined Radio (SDR) Lab
 - We designed needed blocks in Simulink for both transmitter and receiver and examined the system by sending a picture with a dipole antenna using a USRP cheap.

COMPUTER SKILLS

- **Proficient:** MATLAB, C/C++
- **Comfortable:** R, Python

LANGUAGES

- English: Fluent
- German: B2 level
- Farsi: Native language
